Software Testing | Quality Assurance

5+ years of experience in Software Testing - Experience in Manual Testing, API Testing and Automation Testing using Selenium. To be part of a company with creativity and innovation where my skills can be put to optimal use and which provides me a platform to improve in multiple dimensions

Career Summary

- Having **5+ years** of experience in the field of **Software Testing**
- Experience in **Manual** testing**, API** testing**, ADB commands (Android), Automation** and Agile Methodology
- Experience on **SQL**
- Proficient in **Software Test Life cycle (STLC)** and **Software Development life cycle (SDLC)**
- Good Analytical skills to comprehend Business requirements and verification of those requirements
- Experienced in writing **Test scenarios, Test cases**, and **Test data** by using test case design techniques
- Excelled in performing **UI testing**, **Functional testing, Smoke testing, Sanity testing, Integration testing, System testing, Re-Testing**, and **Regression testing**
- Worked on both **WEB** & **Mobile** Applications
- Worked on Project management tools like **VSTS, JIRA**

Automation

- Automation Using **Selenium tool**
- **Java** programming language
- Used **Maven** for building Project & dependency management
- Used **TestNG** & Data-Driven framework with Page Object Model design pattern
- Generated HTML Reports using extend reports
- Used Apache POI for getting data from Excel file
- Knowledge on writing customized Xpath

Professional Experience

- Dec 24 – Till date: Deloitte (Payroll: SourceOne Management Pvt Ltd)
- Nov'23 – Oct'24: Unisys India Pvt Ltd, Hyderabad as Application Test Engineer
- Dec'21 – March'23: Devrabbit IT Solutions Pvt Ltd, Hyderabad as Senior Quality Analyst
- Oct'20 – Dec'21: Qik TechSoft Solutions Pvt Ltd, Delhi as Test Engineer
- Jul'18 – Jul'20: Energetic Info Solutions Pvt. Ltd., Hyderabad as Jr. Test Engineer

Education

B.Sc. (Computers) | Aditya Degree College, affiliated to Andhra University (Graduated: June 2013)

Skill set

- **Programming**: Core Java, SQL, ADB Commands (Android)
- **Automation**: Selenium, Page Object Model (POM), TestNG, Data Driven, Maven
- **Testing Tools**: Postman, Eclipse
- **CI/CD**: GitHub

Projects Undertaken

Project Name: Bervity

Description: Bervity is web application where different mortgage lender organization can process their customer loans & track the status of the loan step by step. It is an internal application used by the executives for end-to-end loan processing by different users (LO, PM, CF) for Purchase, Refinance and Cashout.

Roles and Responsibilities:
- Understanding business requirements and identifying **test scenarios**
- Write/Review/Execute **Test cases**
- Identifying test data using **Test case design technique**
- Updating the traceability matrix to achieve minimum coverage in the project
- Performing **functional testing, smoke testing, integration testing,** and **system testing**
- Performing **API testing** Using **Postman**
- Used **Postman Monitoring** for checking **API performance**
- Generate **API reports** using **Newman**
- Identifying & analysing the defects & raising defects in JIRA tool
- Doing **regression** testing on bi-weekly basis
- Testing the application in the QA & UAT Environment
- Giving Sign off for release

Project Name: Notifii

Description: Notifii is web-based package management and notification software to solve basic logistical problems by simply increasing correspondence; it is realized that by simply keeping people notified, whether it be residents, students, co-workers, etc.–could potentially solve dozens of operational challenges

Roles and Responsibilities:
- Understanding business requirements and identifying test scenarios
- Write/Review/Execute Test cases
- Identifying test data using test case design technique
- Updating the traceability matrix to achieve minimum coverage in the project
- Performing functional testing, smoke testing, integration testing, and system testing
- Performing **API testing** using **postman**
- Generating **HTML reports** for **API testing** using **Newman**
- Running **SQL queries in DB** to cross-check the response from the API
- Testing **Mobile Applications in Android** & **IOS**
- Using **ADB commands** to generate logs for the defect found in **Android devices**
- Identifying & analysing the defects & raising tickets in the defect tracking tool
- Perform **Regression** testing with **Automation**
- Used **Selenium** with **Java** Programming Language
- Used **Data Driven framework, TestNG** with **Page Object Model (POM)**
- Used **Apache POI** for getting test date from external Excel file
- Used Extend reports for generating HTML Reports
- Logging defect in the JIRA
- Giving testing result update to the team and management
- Giving sign off for the release

Project Name: QikCircle

Description: Qikcircle is Web & Mobile application for the Resorts & Restaurant. To maintain and track all their activities.

The Resort Application is for Booking/Reservation of room, check-in & check-out of Rooms, Room service, Billing & Generating reports. Tracking & allocation work to the employees.

The Restaurant Application is for maintaining Menu, taking food orders based on table numbers, Bill generation & Report generation

Roles and Responsibilities:

- Understanding business requirements and identifying test scenarios
- Write/Review/Execute Test cases
- Identifying test data using test case design technique
- Performing functional testing, smoke testing, integration testing, and system testing
- Performing **API testing** using **postman**
- Generating **HTML reports** for **API testing** using **Newman**
- Testing **Mobile Applications** in **Android**
- Identifying & analysing the defects & raising tickets in the defect tracking tool
- Generating testing reports, QA status reports and report to stakeholders as appropriate
- Giving Sign off for release

Project Name: Truckish
Description: Trickish is related to Logistics domain, it is a platform where Transport organization & end user (customer) meet and make business. Customer can search for the trucks based on his preference. While transporting customer receive link through which he can track the goods.
Roles and Responsibilities:
- Understanding business requirements and identifying test scenarios
- Write/Review/Execute Test cases
- Identifying test data using test case design technique
- Performing **UI testing, web application responsive testing, cross browser testing**
- Performing functional testing, smoke testing, integration testing, and system testing
- Identifying & analysing the defects & raising tickets in the defect tracking tool
- Working on **simulator** to replicate **GPS** of the truck
- Check data flow from **GPS tracker** to Transport organization and customer
- Updating testing status to the Senior QA & testing Team Lead

Declaration: I do here by declare that the particulars of information and facts stated here in above are true, correct, and complete to the best of my knowledge and belief.
